

Helicopter

The **eme** Max Gantry Crane series is designed specifically for aircraft maintenance lifting. Our innovative aluminum design is lightweight, portable, moveable under-full-rated-load and can be customized for your specific aircraft and maintenance environment.

LIGHTWEIGHT, PORTABLE, EASY TO USE

The **eme** aluminum Gantry Crane Max series is designed for high lift requirements. The all aluminum design and 4-way swivel locking casters make it easy to maneuver the crane, allowing mechanics to easily position the crane to work on helicopters with precision. With capacity from 2,200lbs to 8,800lbs and fully adjustable lift height up to 216 inches at 8,800lbs, the Max series can service a wide range of aircraft.

An operator can take the Max into the field to repair an aircraft that needs maintenance. It is easily transported to an off-site location in a pickup truck or van truck. We understand that aircraft can become stranded on a roof-top helipad. Getting equipment to the rooftop in a commercial elevator can be troublesome, which is why we invented the **eme** Split-Beam. The Split-Beam breaks into two smaller beams for easy transport and can be quickly assembled onsite.

As with all **eme** Gantry Cranes, the Max series can be rolled while fully loaded.

CUSTOMER SERVICE AND RAPID TURNAROUND

As a customer-first organization, **eme** prides itself on rapid order turnaround. We can typically have your **eme** Max series shipped within a few days of receiving the order.

SAFETY AND CERTIFICATION

eme takes your safety seriously. We have been manufacturing Gantry Cranes since 2003 and have an impeccable safety record. Every **eme** Max Gantry Crane comes with:

- Engineers Stamped Drawings
- Certificate of Test shipped with each product with corresponding serial number
- Load tested to 125% of rated capacity

eme Max Series Gantry Cranes Overview

The **eme** Max series is purpose built for the aviation environment and provides unparalleled stability at all lift heights, beam lengths and lift capacities.

Our Max series eliminates the need for permanent overhead cranes or immobile steel gantries. It mitigates the risk associated with ad hoc maintenance strategies such as hanging components off of a forklift while several AME's try and maneuver it to safety.
